

QUANTIS

DEMONSTRATION RELEASE

Market intelligence, *engineered as a system.*

A private-source research platform with a native C++20 analytical core, consistent web, CLI, and API delivery, and an explicit path from controlled demonstration to full-suite intelligence.

C++20 / REACT / REST / SSE / POSTGRESQL

OPEN LIVE PREVIEW

A focused research surface. One analytical source of truth.

Quantis turns a market snapshot into a structured research view. The stateful C++20 engine owns market state and analysis. The web workspace, native CLI, and REST API consume the same typed results without duplicating financial calculations in presentation code.

SHIPPED IN THE DEMO

Native CLI

Module discovery, one-shot analysis, persistent watchlists, and live monitoring.

React workspace

Overview, screener, technical, sentiment, and synchronized ticker management.

REST and SSE

Authenticated JSON research endpoints and one-second streaming updates.

Controlled access

Invitation codes, access requests, secure sessions, and minimal profile state.

The C++20 engine stays central. Everything else stays composable.

The target architecture separates external signal sources, ingestion, intelligence, platform services, delivery surfaces, and cross-cutting trust controls. Green blocks operate in the demonstration. Violet blocks describe the full-suite direction.

DEMO CORE

C++ engine, API and streaming, native CLI and APIs

FULL SUITE

Normalized ingestion, profiles, sharing, notifications, terminal

EXTERNAL

Market data, news, social, brokerages, and wallets

03 / ENGINE DELIVERY

One registry. Three production-quality surfaces.

Every analysis result carries module metadata, signal direction, score, confidence, measured value, unit, summary, and supporting insights through a shared native contract.

QUANTIS CLI SUPPORTED TODAY
quantis 1.0.0
quantis-ssh % quantis modules
MODULE          CATEGORY      DESCRIPTION
-----
Relative Strength Index    technical    Measures the balance of recent gains and losses over 14 samples.
EMA Crossover              technical    Compares fast and slow exponential moving averages.
MACD Momentum              technical    Tracks convergence and divergence between two trend speeds.
Bollinger Position         technical    Locates price within a two-standard-deviation volatility envelope.
Relative Volume            technical    Compares current activity with the instrument baseline.
Volatility Regime          technical    Classifies short-horizon realized volatility.
Headline Polarity         sentiment    Scores curated headlines with a transparent financial lexicon.
Recency Weighted Sentiment sentiment    Gives newer headlines more influence than older coverage.
Source Consensus          sentiment    Measures directional agreement across distinct sources.
Price-Sentiment Divergence sentiment    Highlights disagreement between price direction and headline tone.

[/watchlist](#)

Authenticated JSON endpoints plus server-sent live updates. No brokerage, custody, payment, order, or transaction endpoint exists.

04 / PRODUCT SCOPE

Shipped capability on the left. Full-suite direction on the right.

The target column is a system-design commitment, not a claim of present availability, capacity, certification, or external partnership.

DEMONSTRATION RELEASE

- **Data**
Simulated one-second snapshots and curated headlines
- **Universe**
12 curated U.S. equities
- **Analysis**
Six technical and four sentiment modules
- **Profiles**
Invitation-controlled shared demonstration workspace
- **Delivery**
Web, native CLI, REST API, and SSE
- **Connections**
No brokerage or wallet connections
- **Transactions**
No trading, custody, or payments

FULL-SUITE TARGET

- **Data**
Licensed live and historical feeds plus active news and X tracking
- **Universe**
Stocks, ETFs, and crypto; up to 250 instruments per profile
- **Analysis**
Expandable native technical and sentiment packs
- **Profiles**
Private, household, team, and consultant workspaces
- **Delivery**
Live charts, terminal, alerts, reports, and device sync
- **Connections**
Read-only wallets and approved brokerage providers
- **Transactions**
Read-only baseline; execution remains a separate decision

FULL-SUITE NON-FUNCTIONAL TARGETS

10,000

profiles

1,000

concurrent users

99.9%

availability objective

< 2s

online device sync

5m

recovery point

1h

recovery time

Targets assume horizontal deployment, asynchronous event processing, caching, replicated engine workers, and partitioned storage.

Private by design. Read-only by default.

The demonstration minimizes the data it needs and keeps product evaluation separate from financial execution. The full suite deepens those controls without moving identity, OAuth, or presentation responsibilities into the C++ engine.

SECURITY

Digested access codes and tokens, cryptographically random sessions, secure cookies, rate limits, and browser security headers.

PRIVACY

Minimal invitation, request, session, and watchlist information. No brokerage credentials, seed phrases, or private keys.

RELIABILITY

Transactional state, reconnecting streams, health checks, and an explicit path to managed backups and recovery procedures.

ACCESS

Invitation-only evaluation with reusable server-managed sessions and a direct request-access workflow.

INVITATION-ONLY PRODUCT PREVIEW

See the market with signal.

Explore the current demonstration, review the architecture, and request access directly from the product entry screen.
